

ECC006 — Web Design

Homework Assignment #8

Part 1: Movie Web Page (movie8.html)

The file movie8.html contains a web page about the movie Interstellar. The page uses a two-column HTML table to display the required movie details. CSS is applied within the <style> tag to style the table border, background colors, and overall page appearance. Below is a description of each element included in the page.

Movie Details

Title: Interstellar

Director: Christopher Nolan

Leading Actor: Matthew McConaughey

Leading Actress: Anne Hathaway

Rating: PG-13

Description: Interstellar is a 2014 science fiction film in which a team of astronauts travels through a wormhole near Saturn in search of a new home for humanity. The film explores themes of love, time, and sacrifice across different dimensions of space. It is widely praised for its stunning visuals and emotionally powerful story.

Review link: [Roger Ebert review of Interstellar](#)

Email link: An e-mail link is placed at the bottom of the page using the mailto: attribute, allowing visitors to contact the page author directly.

CSS Styling Applied

- The table uses `border-collapse: collapse` and `border: 2px solid #333333` to create a clean, defined border around the entire table.
- Header cells (<th>) have a dark background (`background-color: #222222`) with white text to distinguish labels from data cells.
- Alternating rows use a light background (`background-color: #f0ede0`) to improve readability.
- The page body uses `background-color: #f5f5f5` and is centered with a maximum width to keep the layout comfortable on wide screens.

File: movie8.html — HTML Source Code

The following is the complete source code of the movie8.html file:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="utf-8">

  <title>My Favorite Movie</title>

  <style>

    body { font-family: Georgia, serif; background-color: #f5f5f5;

           margin: 40px auto; max-width: 750px; line-height: 1.7; }

    table { width: 100%; border-collapse: collapse;

           background-color: #fffef7; border: 2px solid #333333; }

    th { background-color: #222222; color: #ffffff;

         text-align: left; padding: 10px 14px; width: 30%; }

    td { padding: 10px 14px; border-bottom: 1px solid #cccccc; }

    tr:nth-child(even) td { background-color: #f0ede0; }

  </style>

</head>

<body>

  <h1>My Favorite Movie</h1>

  <table>

</body>

</html>

```

Part 2: Web Page Analysis (webanalysis.html)

The file webanalysis.html contains an analysis of two web pages: one that is visually appealing and one that is unappealing. The analysis answers all required questions for each example.

Example 1: Appealing Web Page — Apple (<https://www.apple.com>)

a. URL: <https://www.apple.com>

b. Use of tables: The Apple website does not use tables for page layout. The structure of the page is built entirely with CSS and semantic HTML elements such as sections and divs. Product details are displayed using styled lists and grid layouts rather than tabular data.

c. Use of CSS: Yes. CSS is used extensively for both page layout and visual design. It controls the full-width sections, typography, spacing between elements, image positioning, scroll animations, and the responsive behavior of the layout across different screen sizes.

d. Appealing or unappealing: This page is appealing for the following three reasons:

- The layout is clean and uncluttered. Each product is given ample white space, which makes the page easy to read and visually comfortable.
- The typography is consistent and elegant. Font sizes and weights are used purposefully to guide the reader's eye from headline to supporting detail.
- Navigation is simple and intuitive. The top menu is minimal and clearly labeled, allowing users to find what they need without confusion.

e. Suggested improvements: Not applicable. This page is considered appealing.

Example 2: Unappealing Web Page — Arngren (<https://www.arngren.net>)

a. URL: <https://www.arngren.net>

b. Use of tables: Yes. The page uses tables heavily for page layout. Nearly all content, including product images, prices, and categories, is placed inside nested tables. This is an outdated

approach that was common before CSS-based layout became standard, and it makes the page difficult to read and maintain.

c. Use of CSS: The page uses minimal CSS. Most styling is applied directly through old HTML attributes such as font tags and inline color settings. There is no consistent use of external or internal stylesheets to manage the page's appearance in a structured way.

d. Appealing or unappealing: This page is unappealing for the following three reasons:

- The layout is extremely cluttered. Dozens of products, images, and links are crammed into every corner of the page with no spacing or visual hierarchy, making it overwhelming and difficult to focus on any single item.
- There is no consistent color scheme or typography. Text appears in many different fonts, sizes, and colors with no clear purpose, which makes the page look disorganized and unprofessional.
- Navigation is confusing and unclear. There is no obvious menu or logical grouping of products, so the user has no easy way to find what they are looking for.

e. Suggested improvements: The following three changes would significantly improve this page:

- Replace the table-based layout with a modern CSS grid or flexbox structure that organizes products into clearly separated rows and columns with consistent spacing.
- Establish a simple color palette of two or three colors and apply it consistently across headings, backgrounds, and links to create a more professional and readable appearance.

- Add a clear navigation bar at the top of the page with labeled categories so that users can find what they need without scrolling through the entire page.
